

NAPCORE-C-Roads agreement and Mobility Data Days session:

Ecosystem relationship between (RTTI) NAP and C-ITS environment

Authors: Alexander Froetscher & Lígia Conceição

Meeting: Budapest, HUN

Date: 9th November 2023

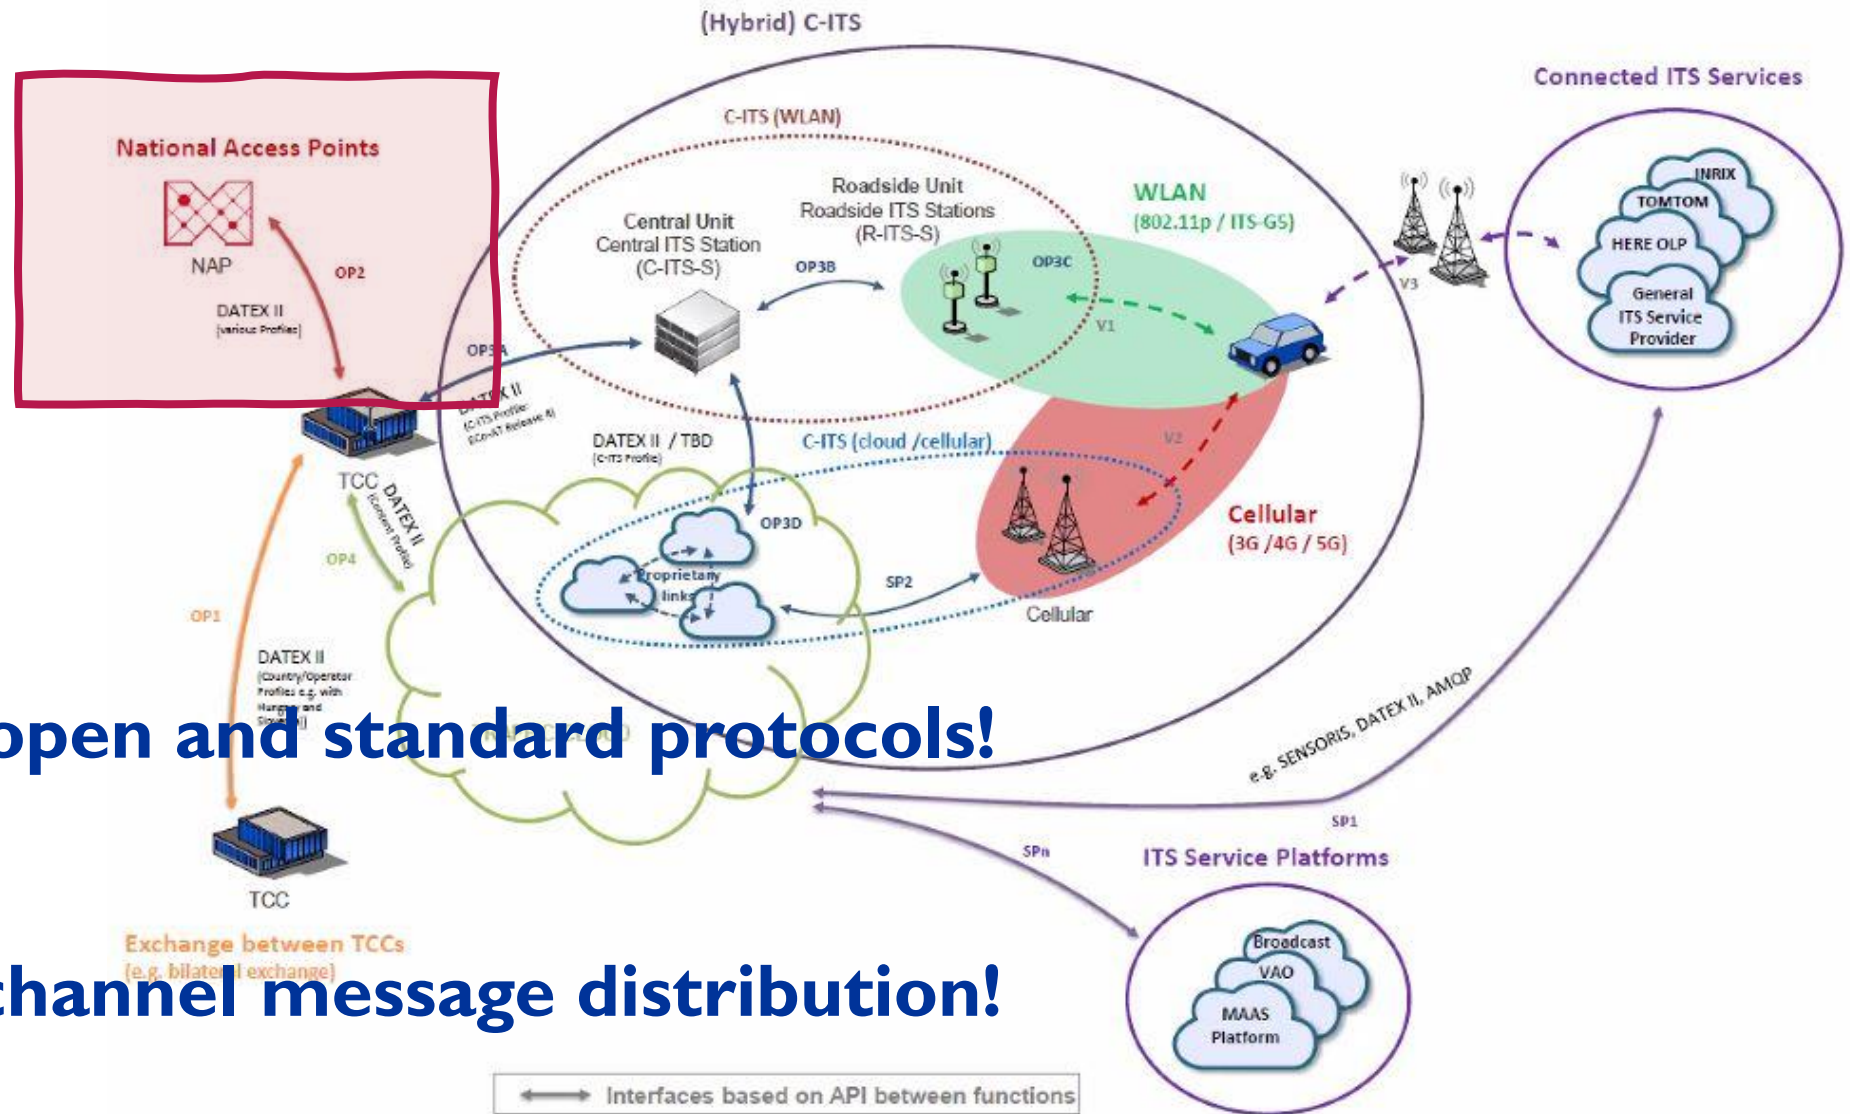

Ecosystem relationship between (RTTI) NAP and C-ITS environment

Background information for this cooperation topic:

- ITS environments in Europe are influenced **by common rules for all participating stakeholders** (public and private), especially for some data aspects in the mobility domain.
- These rules take into account policy goals, e.g. like road safety targets or emissions reduction objectives and **common ITS related standards and data protocols**.
- But there is still a huge difference between the aspects of data availability, or coverage and complete travel information service generation and distribution in an adaptive and user friendly way
=> this is the core topic of discussion for NAPCORE and C-Roads

Ecosystem relationship between (RTTI) NAP and C-ITS environment

C-ITS and DATEX II: Overview

Based on open and standard protocols!

For multichannel message distribution!

Thank You
