

Improving National Access Point interoperability through harmonisation of their Level of Service

Mobility Data Days
Budapest, 8th November 2023

Improving National Access Point interoperability through harmonisation of their Level of Service

1. NAP LoS assessment gaps and actions

- Nuno Rodrigues and Joao Montenegro

2. Round table and panel discussion with NAP operators

- Ed Ooms (The Netherlands)
- Ricardo Tiago (Portugal)
- Jasper Beernaerts (Belgium)
- George Christou (Cyprus)
- Kenneth Sørensen (Denmark)

NAP Level of Service - Gaps and Actions

WG2: Interoperability and level of service of NAPs

Mobility Data Days
Budapest, 8th November 2023

Nuno Rodrigues, João Montenegro

1 NAP LoS KPI Framework (NLKF): quick review

2 NAP LoS - Gaps and actions

WG2 Interoperability and level of service of NAPs

Aiming at defining minimum conditions and coordination efforts for the development and evolution of the NAPs, in order...

- To enhance the compatibility and interoperability of the NAP features
- To enhance the harmonisation of the levels of service of the NAPs

...while

- Taking into account existing architecture of the NAPs in Member States, and
- Maintain and develop common NAP architecture while building upon the existing investments

NAP LoS KPI Framework (NLKF)

NAP Harmonisation starting from NAP state of the art

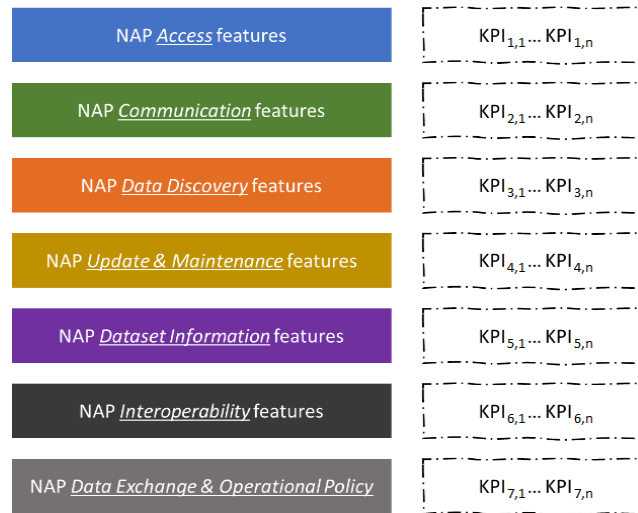

NAP Common Feature List

	Required	Nice to have
Access				
1. The NAP is available over the internet	*			
2. NAP can be navigated easily and is design compliant with web design standards / accessibility	*			
3. NAP is provided in the national language and commonly used language(s) of the Member State	*			
4. NAP follows EU data protection and industry data security standards	*			
5. NAP requires data publishers to register to add their data / metadata	*			
6. NAP requires data consumers to register for full access		*		
Communication				
7. NAP provides help for data publishers to register, add data / metadata	*			
8. NAP provides Terms & Conditions	*			
9. NAP is promoted	*			
10. NAP provides means for data consumers to contact NAP operator and / or data provider for assistance	*			
Finding datasets				
11. NAP provides appropriate discovery services	*			
12. Datasets can be searched using a metadata catalogue	*			
13. The NAP provides machine readable metadata		*		
14. The NAP provides a map-based search		*		
Update and maintenance				
15. The NAP service is maintained	*			
16. The NAP content and metadata is maintained and makes best effort is made to keep content up-to-date	*			
17. NAP monitoring and evaluation is undertaken		*		
Dataset information				
18. NAP provides clear descriptions of each dataset	*			
19. NAP provides dataset documentation (or links) where required	*			
20. NAP datasets classified according to standard / controlled vocabularies		*		
Extra category				
1. ...	*			
2. ...	*			
3. ...		*		

Category	Common Feature List
Access	1.1 On-line availability
	1.2 Compatibility with web browsers
	1.3 Compatibility with operating systems / platforms
	1.4 Responsiveness
	1.5 Web performance – Simplicity/ usability
	1.6 Web performance – Visual hierarchy/ navigability
	1.7 Web performance – Consistency
	1.8 Support of commonly used languages
	1.9 Security - Technical
	1.10 Security- providers verification
	1.11 Personal data protection
	1.12 Procedure for publication of data on the NAP
	1.13 Metadata access restrictions
	1.14 Data security and access restrictions for uploading
	1.15 Data security and access restrictions for downloading
	1.16 Indication of data modification
	1.17 Data transfer optimization
	1.18 API usage for data transfer
	1.19 Web performance – latency
	1.20 Data visualization
Communication	2.1 Provision of support to users to register and add data/metadata
	2.2 Promotion of NAP based on number of related projects
	2.3 Number of different channels on the NAP is regularly promoted (conferences, webinars, social network, homepage, printed media, flyers, etc...)
	2.4 Promotion of NAP based on number of related publications
	2.5 Provision of contact means to data consumers
	2.6 Mass notifications
Data discovery	3.1 Search functionalities
	3.2 Display of search results
	3.3 Provision of machine-readable metadata
Update and maintenance	4.1 NAP IT services
	4.2 NAP content and metadata
	4.3 NAP monitoring and evaluation
Dataset information	5.1 Documentation & description of datasets
	5.2 Classification of datasets based on standard/ controlled vocabularies
Interoperability	6.1 Adoption of Coordinated Metadata Catalogue
	6.2 Support of harvesting functionalities
Data Exchange and Operational Policy	7.1 Provision of Terms and Conditions for data reuse
	7.2 Data licenses described with harmonized pre-defined terms
	7.3 Provision of operational procedure information
	7.4 Provision of dataset indicators related to declaration of compliance
	7.5 Facilitation of compliance assessment procedure
	7.6 Association of published datasets with DRs supplementing the ITS Directive
	7.7 Established quality indicators for datasets

NAP LoS definition based on current NAP features

- LoS based on maturity level approach
- KPI definition per collected NAP feature
- Categories and KPI weights settings based on NAPCORE expert group

KPI	Index i,j	Data platform							Weight	Initial relevancy	Data directory							Weight	Initial relevancy
		#1	#2	#3	#4	#5	#6	#7			Wi,j	#1	#2	#3	#4	#5	#6		
On-line availability	1.1	5	5	4	5	5	5	5	0.96	1	5	5	3	5	5	5	5	0.93	1
Compatibility with web browsers	1.2	5	5	5	5	2	5	3	0.82	1	4	5	5	5	2	5	3	0.79	1
Compatibility with operating systems / platforms	1.3	4	5	5	5	2	3	3	0.71	1	4	5	5	5	2	5	3	0.79	1
Responsiveness	1.4	5	4	4	4	2	2	1	0.54	1	5	4	5	4	2	3	1	0.61	1
Web performance – Simplicity / usability	1.5	4	4	4	4	3	5	2	0.68	1	4	5	5	4	3	5	2	0.75	1
Web performance – Visual hierarchy / navigability	1.6	4	3	4	4	3	3	1	0.54	1	4	2	5	4	3	3	1	0.54	1
Web performance – Consistency	1.7	4	4	4	4	3	3	3	0.64	1	4	3	5	4	3	3	3	0.64	1
Support of commonly used languages	1.8	4	4	3	4	3	5	2	0.64	1	3	4	4	4	3	5	2	0.64	1
Security – Technical	1.9	3	5	5	5	2	5	5	0.82	1	4	4	3	4	2	5	5	0.71	1
Security – Providers verification	1.10	3	4	5	5	2	5	5	0.79	1	3	4	3	4	2	5	5	0.68	1
Personal data protection	1.11	4	5	5	5	1	5	2	0.71	1	4	5	5	5	1	5	2	0.71	1
Procedure for publication of data on the NAP	1.12	3	4	5	4	4	4	3	0.71	1	3	4	5	4	4	3	3	0.75	1
Metadata access restrictions	1.13	3	4	3	4	4	1	4	0.57	1	3	4	4	4	4	1	4	0.61	1
Data security and access restrictions for uploading	1.14	3	4	5	4	4	5	3	0.75	1	4	5	0	4	0	5	3	---	0
Data security and access restrictions for downloading	1.15	3	4	5	4	4	1	2	0.57	1	4	3	0	4	0	1	2	---	0
Indication of data modification	1.16	2	2	3	2	4	3	1	0.36	1	4	2	3	2	0	4	1	0.42	1
Data transfer optimization	1.17	3	3	3	3	3	1	1	0.36	1	4	2	0	2	0	4	1	---	0
API usage for data transfer	1.18	2	3	3	3	4	3	2	0.46	1	5	2	0	2	0	5	2	---	0
Web performance – latency	1.19	4	4	4	4	2	2	3	0.57	1	5	3	3	3	2	4	3	0.57	1
Data visualization	1.20	2	1	1	1	5	1	3	0.25	1	2	0	1	1	0	3	3	---	0
Support to users to register and add data/metadata	2.1	3	3	3	3	4	5	3	0.61	1	5	4	4	4	0	5	3	0.79	1
Related projects monitoring service	2.2	4	1	3	1	1	3	1	0.25	1	2	0	3	1	0	3	1	0.25	1
Related projects built on the NAP data	2.3	4	1	3	1	1	3	1	0.25	1	2	0	3	1	0	3	1	0.25	1
NAP promotion – number of channels	2.4	2	1	3	2	1	1	1	0.14	1	2	0	3	1	1	1	1	0.13	1

NLKF supporting harmonization of NAP LoS

1. NLKF as a reference to be used by

- NAPCORE
- NAP operators / policy makers

2. NLKF basis for NAP LoS European benchmarking:

- NAP LoS yearly self assessment workshop
- European averages or minimum, basic or advanced Level of Service by NAPCORE

3. NLKF inspiring NAP roadmap development and monitoring

- Listing of gaps and actions needed towards harmonisation
- Decision -making on future developments/investments

NLKF: NAP Self-assessment workshop

I - Analysis of the European aggregated results

Outputs:

- 1.1 – Displays, through box plots, the distribution of the Grades of achievement (GA) for each feature category and for the Total GA. Also displays the average GA and Most Frequent value for comparison.
- 1.2 – Displays the number of NAPs in each maturity level, for each Feature category and for the Total GA

I - Analysis of the European aggregated results

Graph I.1: Distribution of GA vs Feature + Average & Most Frequent value

- **Highlights:**

- Feature “Access” presents higher grades and less variance
- Feature “dataset information” presents the largest variance, even though the EU average and Most Frequent value are within the “Advanced” level of maturity
- Most frequent value of the “Interoperability” Feature is within the advanced level of maturity, although the average GA is close to 40
- The EU average for the Total GA is at the “Intermediate” maturity level
- Several features have considerable variance and minimum values equal to zero, which demonstrates a strong need for harmonization

I - Analysis of the European aggregated results

Graph 1.2: Number of NAPs in each level of maturity per Feature

● Highlights:

- Communication has the largest number of NAPs at the beginner level (followed by Update and maintenance)
- Only a few NAPs and features have reached the desired level
- Results for data discovery and dataset information vary a lot (several MS in different maturity levels)

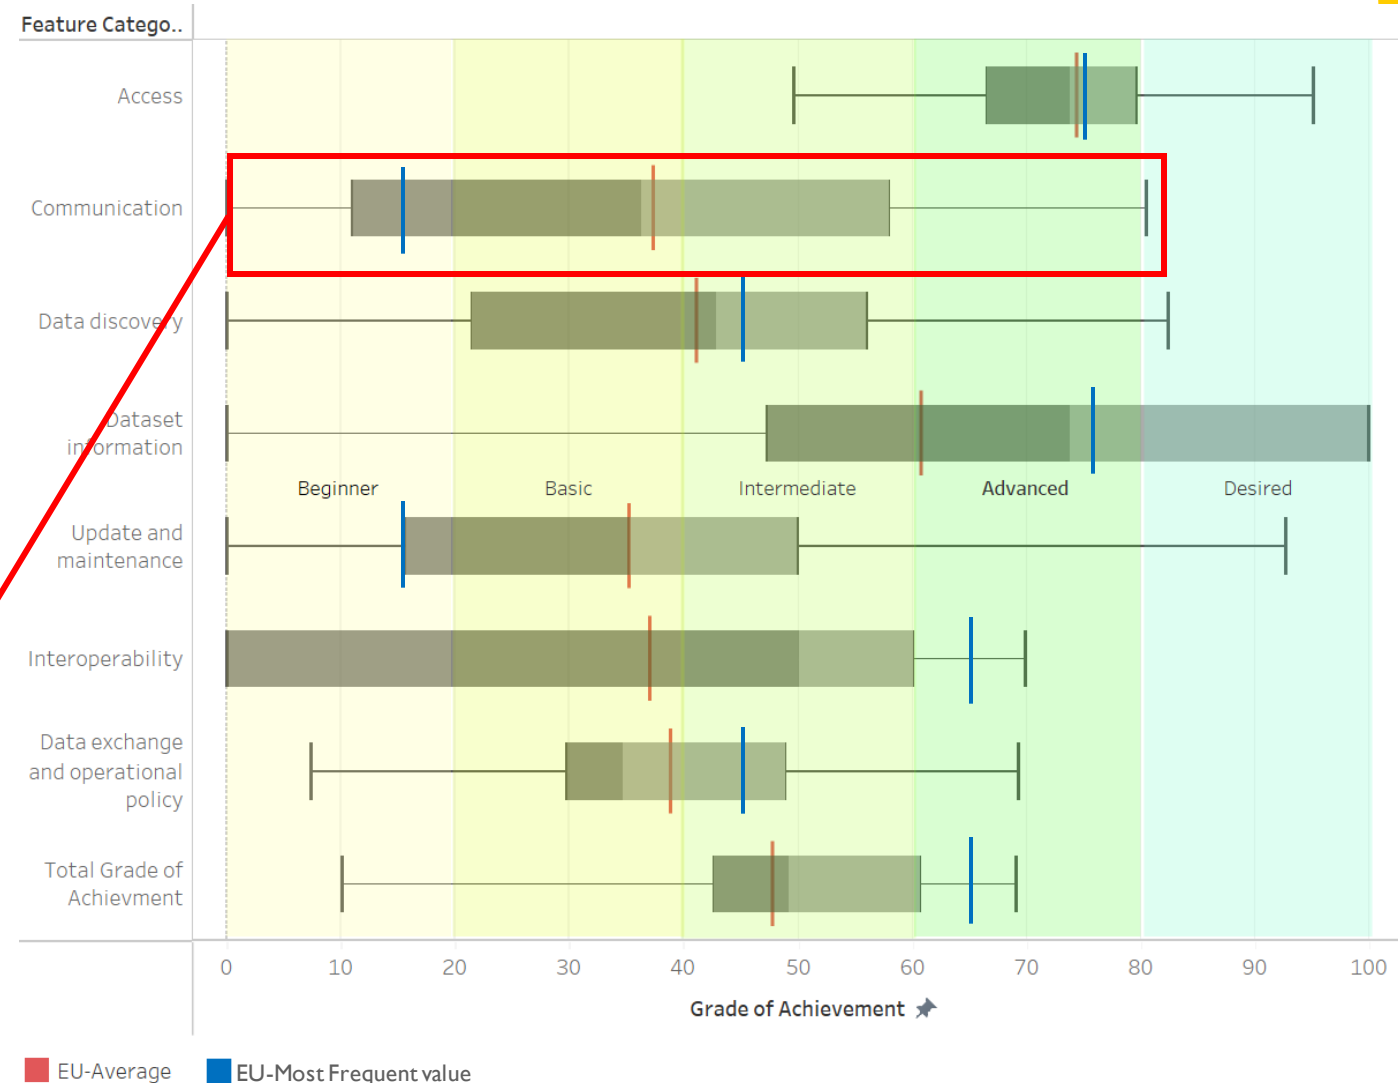

Definition and identification of gaps

- Milestone 2.2 - Overview of gaps and actions needed
- Definition of “gaps”, which could be:
 - Non-satisfied requirements from the DR
 - Gaps from the NAP Reference Architecture
 - Statistical approach using the results from the NAP LoS self-assessment – **adopted (for now)**
- Identification of gaps:
 - Gaps at the **feature category level**
 - Gaps at the **KPI (single feature) level**

Identification of gaps in the feature categories

- Identification of gaps in the **feature category level**
 - Underperforming categories (lower Maturity levels)
 - Lack of harmonisation in certain categories

Example of "Gap" in the feature category level

Identification of gaps in **single features (KPIs)**

- Methodology based on the “minimum” value established by “experts” in NLKF
- KPIs with “significant gaps” were identified according to the following assumptions:
 1. Occurrence of insufficient features – related to the number of NAPs that are not reaching the “minimum acceptable LoS”
 2. Significance of relevant features – related to the weights assigned for each KPI
- Criteria (Metrics) adopted:
 - A. weighted % of NAPs with non-acceptable KPI – for all NAPs regardless of type
 - B. weighted % of NAPs with non-acceptable KPI – for the “data directory” NAP type
 - C. KPI weights – for all NAPs

Identified gaps in single features

- According to the pre-established criteria, 14 KPIs have been identified with the most significant gaps,
- These were considered for recommended "actions"

#	KPI	KPI name	Metric A
			Weighted % NAPs below min LoS
1	3.3	Machine-readable metadata	43.7
2	6.1	Metadata catalogue	38.1
3	1.15	Data security and access restrictions for downloading	36.7
4	1.14	Data security and access restrictions for uploading	34.8
5	7.2	Data reuse – data provider	26.6
6	2.6	Contact means	25.4
7	5.1	Documentation & description of datasets	25.3
8	1.12	Procedure for publication of metadata or data on the NAP	24.8
9	7.3	Operational procedure information	23.9
10	1.16	Indication of data modification	B*
11	4.2	Content and metadata	B*
12	6.2	Harvesting Functionalities	B*
13	3.1	Search functionalities	C*
14	3.2	Search results	C*

Proposed actions to close the identified gaps

- Actions were divided into:
 1. Organisational
 2. Technical

- And further classified as:
 1. European/National/NAPCORE level
 2. Short term/long term
 3. One time/recurring

- In total, 35 actions have been drafted

Search functionalities

KPI 3.1: Not featured by 4 of 22 NAPs

KPI definition: Search functionalities

Possible KPI values:

- **0:** Not available discovery services;
- **1:** Available discovery services not necessarily based on harmonized metadata;
- **Value+1** for each of the following options:
 - a. text search based on harmonized metadata (free text);
 - b. text search based on harmonized metadata (proposed keywords);
 - c. search options AND, OR, wild card (*), range (from... to...) available;
 - d. enumeration search based on harmonized metadata;
 - e. map-based search;
 - f. other location-based search (e.g., NUTS-Code);
 - g. option to save search pattern or settings
- **Acceptable minimum: 2**

Organizational actions

- | | |
|---|--|
| <ul style="list-style-type: none"> ● Propose keywords and harmonised naming conventions for the data sets | <ul style="list-style-type: none"> ● NAPCORE level ● Short term ● One time |
| <ul style="list-style-type: none"> ● Propose a roadmap from the simple search functionality to minimum search functionality (the metadata guideline) | <ul style="list-style-type: none"> ● European level ● Short term ● One time |

Technical actions

- | | |
|---|--|
| <ul style="list-style-type: none"> ● NAP operators to implement search functionalities with basic search options | <ul style="list-style-type: none"> ● National level ● Short term ● One time |
|---|--|

Recommendations for stepwise approach towards an interoperable NAP landscape in Europe

- Sequence of recommended actions - the identified actions with a clear assignment for NAPCORE are grouped into four higher goals:
 1. Improve metadata of data offers
 2. Improve contact details and terms and conditions of data offers
 3. Improve data quality of data offers
 4. Align user experience of data consumers
- The assigned actions (next slide) within the groups are ordered according to an estimation of how quickly they can be completed

Grouped and ordered NAPCORE actions (I)

Higher goals	Actions		
	No.	Description	Related KPI
Improve metadata of data offers	1	NAPCORE to develop and publish (European) mobilityDCAT-AP (Ongoing work – SWG 4.4)	3.3
	2	NAPCORE provide guidelines / support to data providers about the adoption and use of standardized metadata	6.1
	3	NAPCORE to propose keywords and harmonised naming conventions for the data sets	3.1
	4	NAPCORE should agree on a common framework how to describe datasets and when possible or available provide templates or examples	5.1
	5	NAPCORE to develop of a metadata quality and completeness check framework to facilitate the decentralization of metadata creation and maintenance burden.	1.12
	6	NAPCORE to provide mobilityDCAT-AP validator / test centre	3.3
Improve contact details and terms and conditions of data offers	1	NAPCORE to make the provision of data providers and NAP operator (of a minimum) contact details mandatory in mobilityDCAT-AP	2.6
	2	Include contact of NAP operator and of the data providers as part of the NAPCORE NAP Reference Architecture	2.6
	3	NAPCORE should agree on a common framework how to describe terms and conditions and when possible or available provide templates or examples	7.2
Improve data quality of data offers	1	NAPCORE to provide a template for NAP Operators on governance aspects, requirements concerning processes and responsibilities for data quality assessment and maintenance should be harmonized among the NAP Operators	7.3
	2	NAPCORE should agree on a common procedure for how data can be supplied by data providers	1.12
	3	NAPCORE to further develop a common data quality framework for assessment (Quality Frameworks are being developed under WG3)	4.2
Align user experience of data consumers	1	NAPCORE should agree on a common procedure how data modifications are displayed in DCAT-AP and dealt with at server level.	1.16
	2	NAPCORE guideline on how to make search results available to users	3.2
	3	NAPCORE to create a guideline for harvesting metadata from and to the NAP	6.2

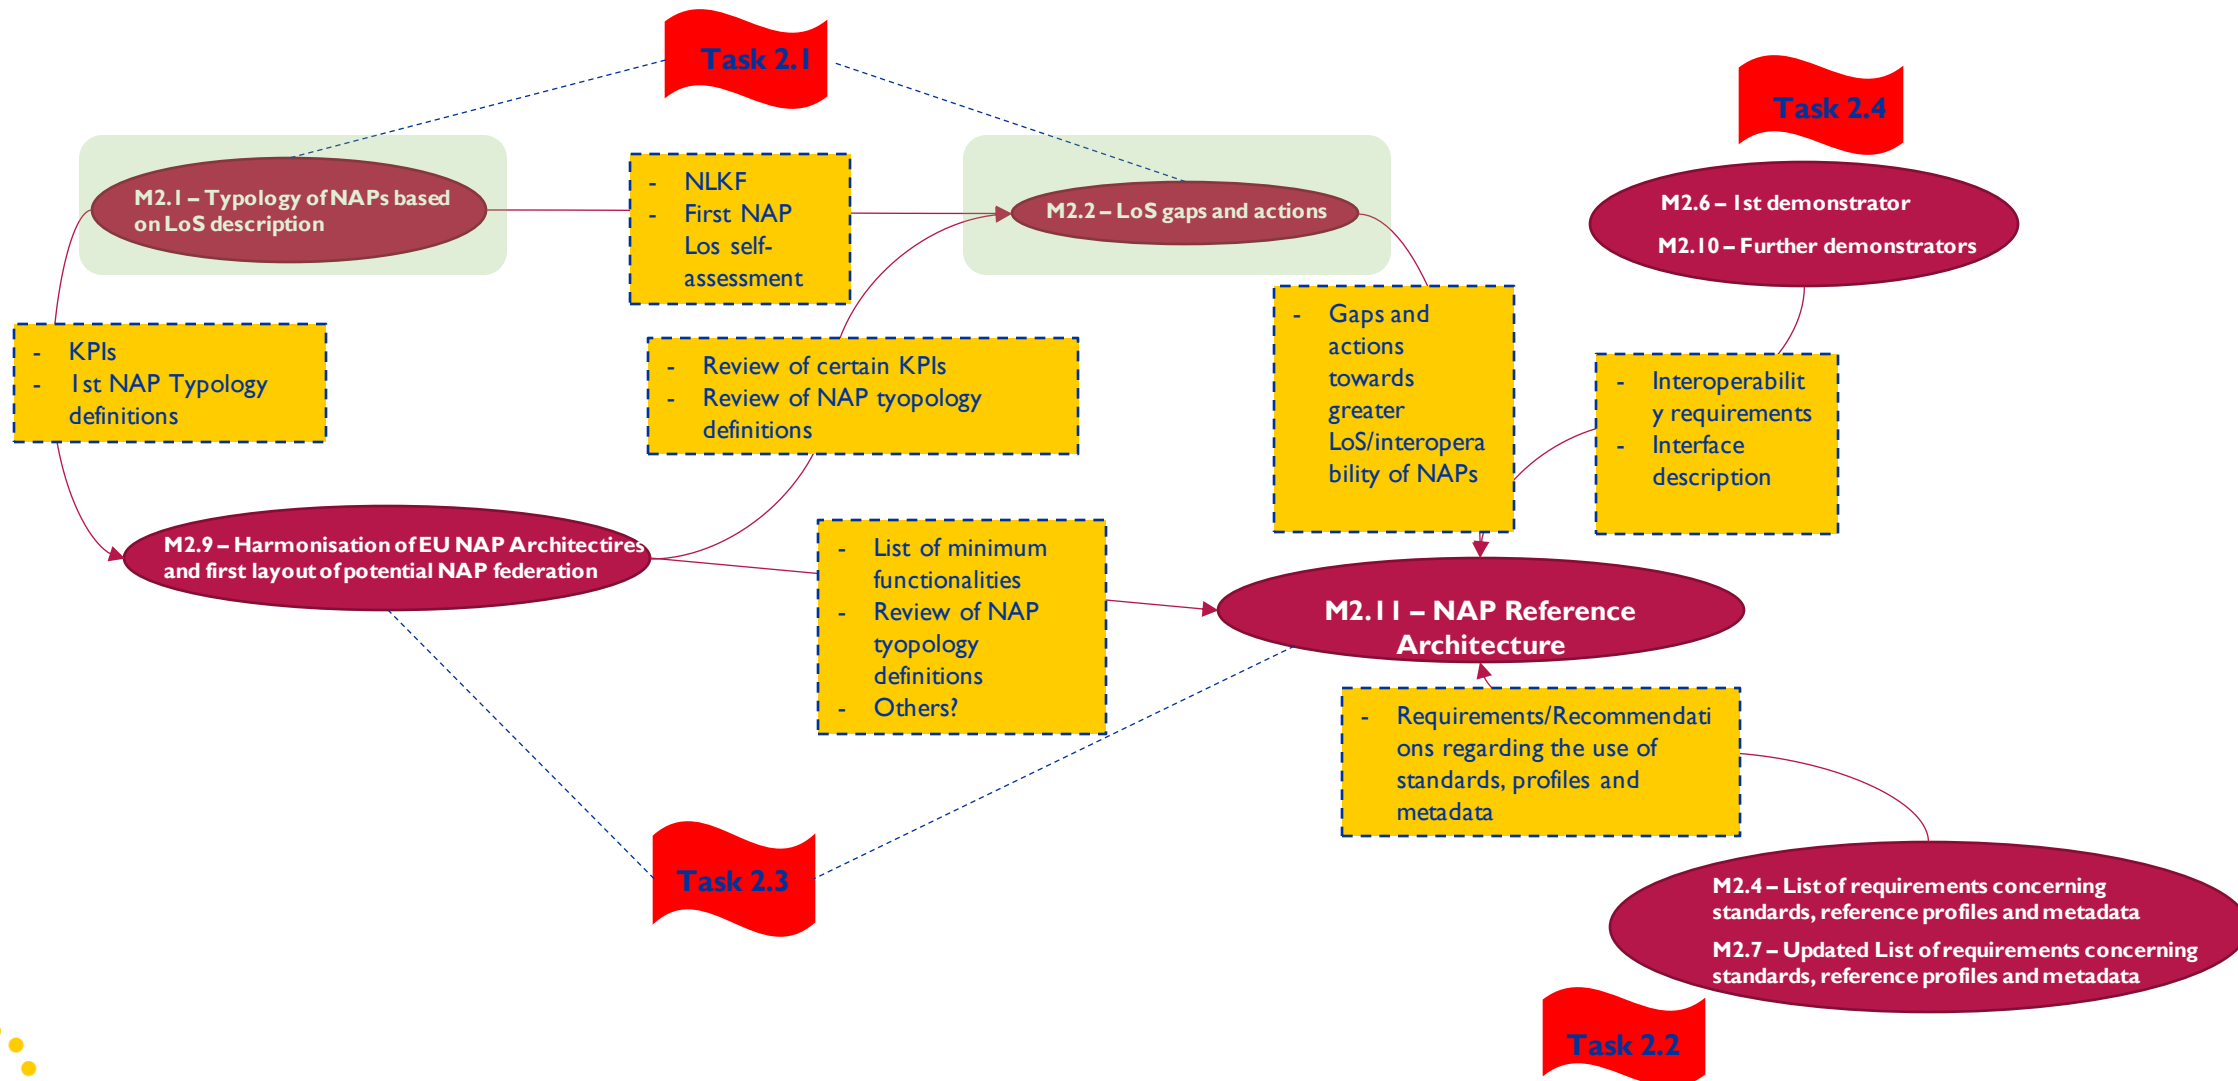

Prioritizing actions in the perspective of the NAP operators

- Focusing on the NAP operators perspective, technical actions targeted at a national level were gathered:

Action	Estimated temporal segmentation	Recurrence
Implement sufficient security mechanisms able to authenticate the users. (KPI only applicable for exchange of content data, not for metadata.)	Short term	One time
Implement search functionalities with basic search options	Short term	One time
Implement search functionalities displaying search results in different ways	Short term	One time
Implement harvesting functionality (checks, crosschecks, updates, etc)	Short term	One time
Require data providers to provide documentation describing datasets according to provided framework or template.	Short term	Recurring
Provide guidelines / support to data providers about the adoption and use of standardized metadata	Short term	Recurring
Implement DCAT-AP in the NAP	Long term	One time
Provide guidelines on how to describe and document datasets published on NAPs	Long term	One time

- Summarized set of actions can be incorporated into the NB's plans for improving their NAPs
- Short/long-term division may help to draw a roadmap for such an upgrade

WG2 alignment - Interoperability

Conclusions and next steps

1. NAP LoS KPI Framework to be updated to a 2024 iteration
2. 2nd NAP LoS self assessment Workshop in Q1-2024
3. NAP European LoS Benchmark 2024

Thank you

Improving National Access Point interoperability through harmonisation of their Level of Service

Mobility Data Days

Budapest, 8th November 2023

Ed Ooms - Dutch National Access Point for Mobility Data

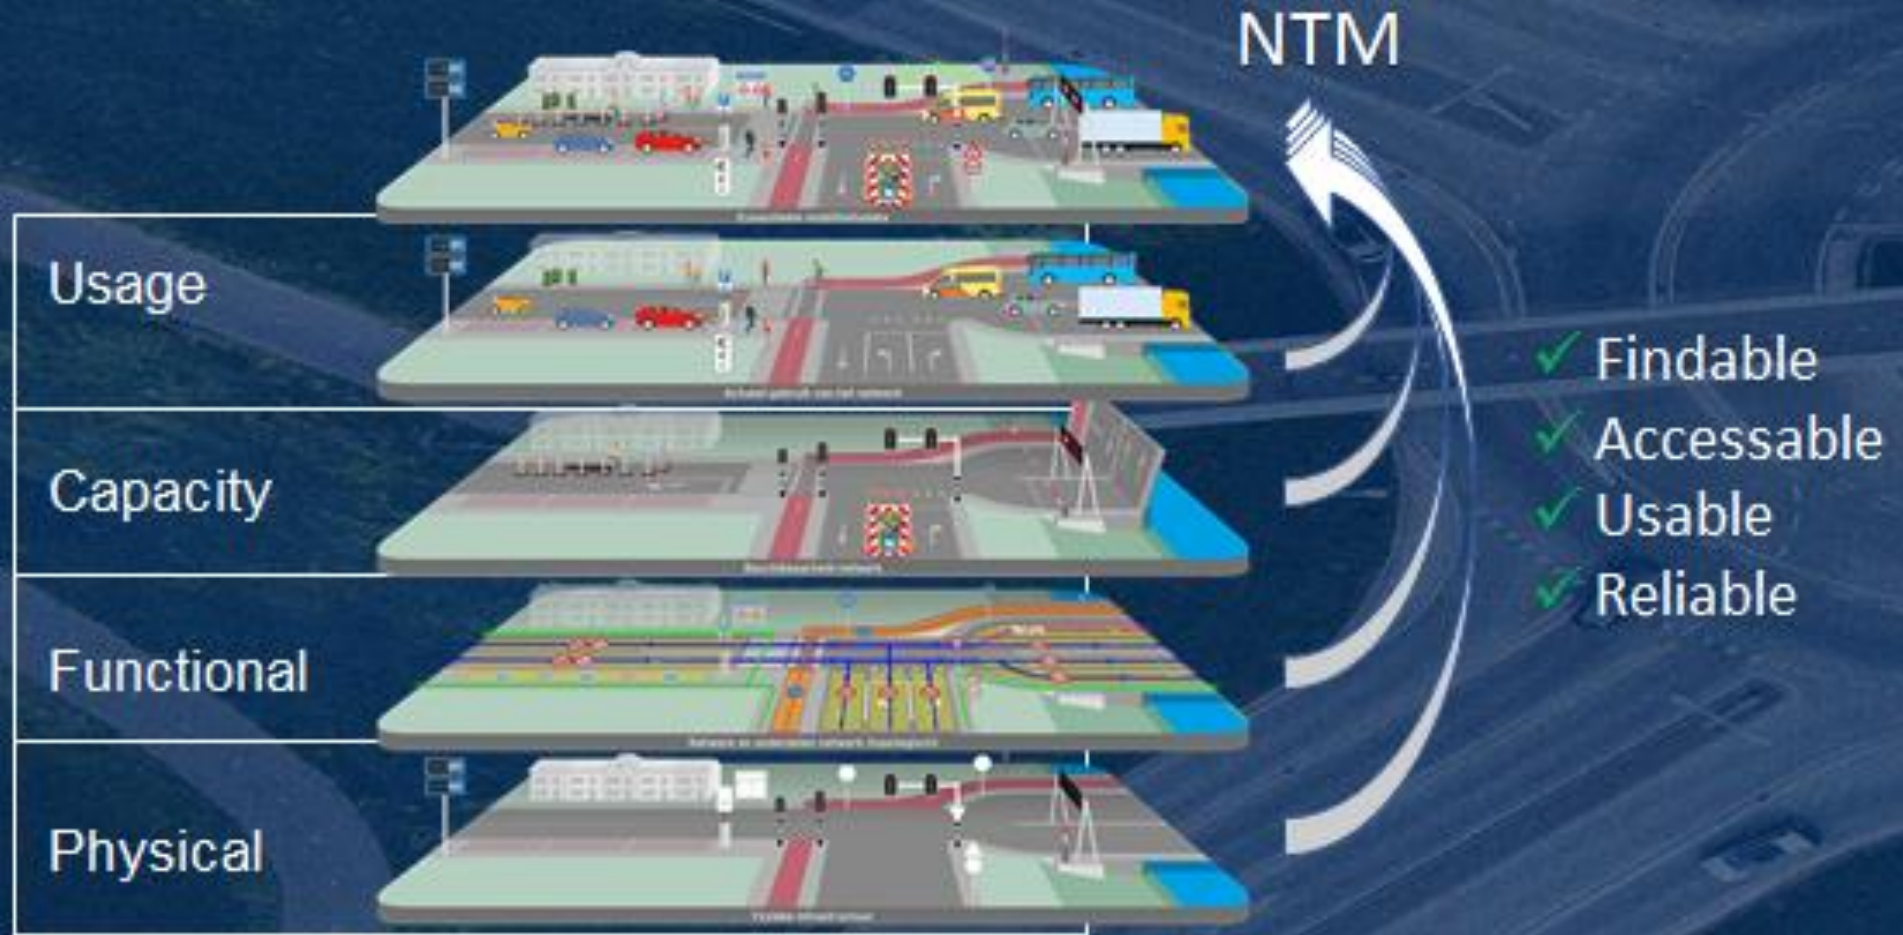

Nationaal Toegangspunt Mobiliteitsdata

Mobility data

Some figures

2- Individual results (NL)

b) Maturity level of the Dutch NAP's features in the EU landscape

Example I

Machine-readable metadata

- a. Not available machine-readable metadata
- b. Provision of machine-readable metadata in a self-describing format (JSON, XML, ...)
- c. Provision of machine-readable metadata as Linked Data (“RDF” that also can be expressed in JSON-LD, ...) in a self-describing format according to harmonized metadata application profile

Example 2

Monitoring and evaluation

- a. counting of the access to the NAP or subscribers
- b. collecting statistics on the consumption of datasets (e.g., downloads, page views, re-use)
- c. measuring performance of the system (e.g., downtime, consequences for other systems, etc.)
- d. measuring usefulness of the NAP (e.g., qualitative feedback, re-use rating of quality, surveys, etc.)

Thank you

Δεδομένα Δημόσιων Μεταφορών σε Πραγματικό Χρόνο (Real-Time Passenger Information)

Complete collection of data for public bus transportation throughout Cyprus. The collection includes:

-General Transit Feed Specification (GTFS) files for all providers and routes across the island, regularly updated and as needed. -Real-time bus telemetry data service - Service interface for Real-Time Information (SIRI). -Bus Stop Catalog in CSV format. -Routes in vector format (SHP).

Important Notes: -The publication of this dataset replaces the 5 datasets related to Public Transportation in the districts of Nicosia, Limassol, Larnaca, Paphos, and Famagusta, as well as those concerning the small buses of Nicosia Municipality and intercity buses. -Data regarding both bus stops and routes are reviewed at regular intervals, and therefore, modifications may exist that are not reflected in the data for a certain period. Every effort is made to ensure that the information and data uploaded are up-to-date and error-free. However, we cannot guarantee the accuracy of all the information and data posted. When errors are identified, efforts are made to correct them.

Data (metadata) collection

Services for data discovery and download

Visualise data related to the traffic conditions

Current Access Status And Conditions
The CyNAP offers a variety of real time data such as traffic congestion levels, vehicle speeds, public transport live feed etc.

Regulations And Restrictions
The CyNAP accommodates data related to regulations and restrictions (e.g. weight / length / width / height / speed restrictions, etc.)

Infrastructure
The CyNAP gives access to infrastructure data such as road network topology, recharging and refuelling points and stations.

Next Steps: Improve LoS

CYNAP

Stage 1

Focus on prioritizing feature categories with low score

Stage 2

Identify areas to improve LoS of feature categories

Stage 3

Create a plan to improve the LoS

Stage 4

Implement changes on CY NAP

Stage 5

Use the LoS tool to re-assess the CYNAP LoS

Thank you for your attention
