METROPOLITAN
TRANSPORT
AUTHORITIES

Mobility is Metropolitan

Public Transport Data
exists in a legacy
environment that was not
set out to open up

Local & Regional Mobility
Data is as fragmented as
the systems supplied by
the IT(S) industry

ITS Directive RTTI/ MMTIS
and the NAPs are the first
holistic development
paradigm for mobility data

Translating data centrally
only to comply with
regulation does not create
enough value at local level

The speed of technological advancement may bring a need to change ambition for first mover technologies and structures

Data capability is not procured as part of a system but stems from an understanding of value that is nurtured within an organization
